

Math Lab #2:

Final Exam Score Prediction

Sunglok Choi, Assistant Professor, Ph.D.
Computer Science and Engineering Department, SeoulTech
sunglok@seoultech.ac.kr | <https://mint-lab.github.io/>

Overview

- **Prerequisite**

- Anaconda (Individual Edition)

- **Practice: Final Exam Score Prediction**

- The given data
- Expected results
- Practice with the skeleton code
 - Step #1) Find a line

- **Assignment**

- Mission: Complete the given skeleton code

Practice: Final Exam Score Prediction

- The given data (file: data/class_score_en.csv)

midterm (max 125), final (max 100)

113, 86

104, 83

110, 78

101, 79

101, 77

103, 76

71, 94

102, 71

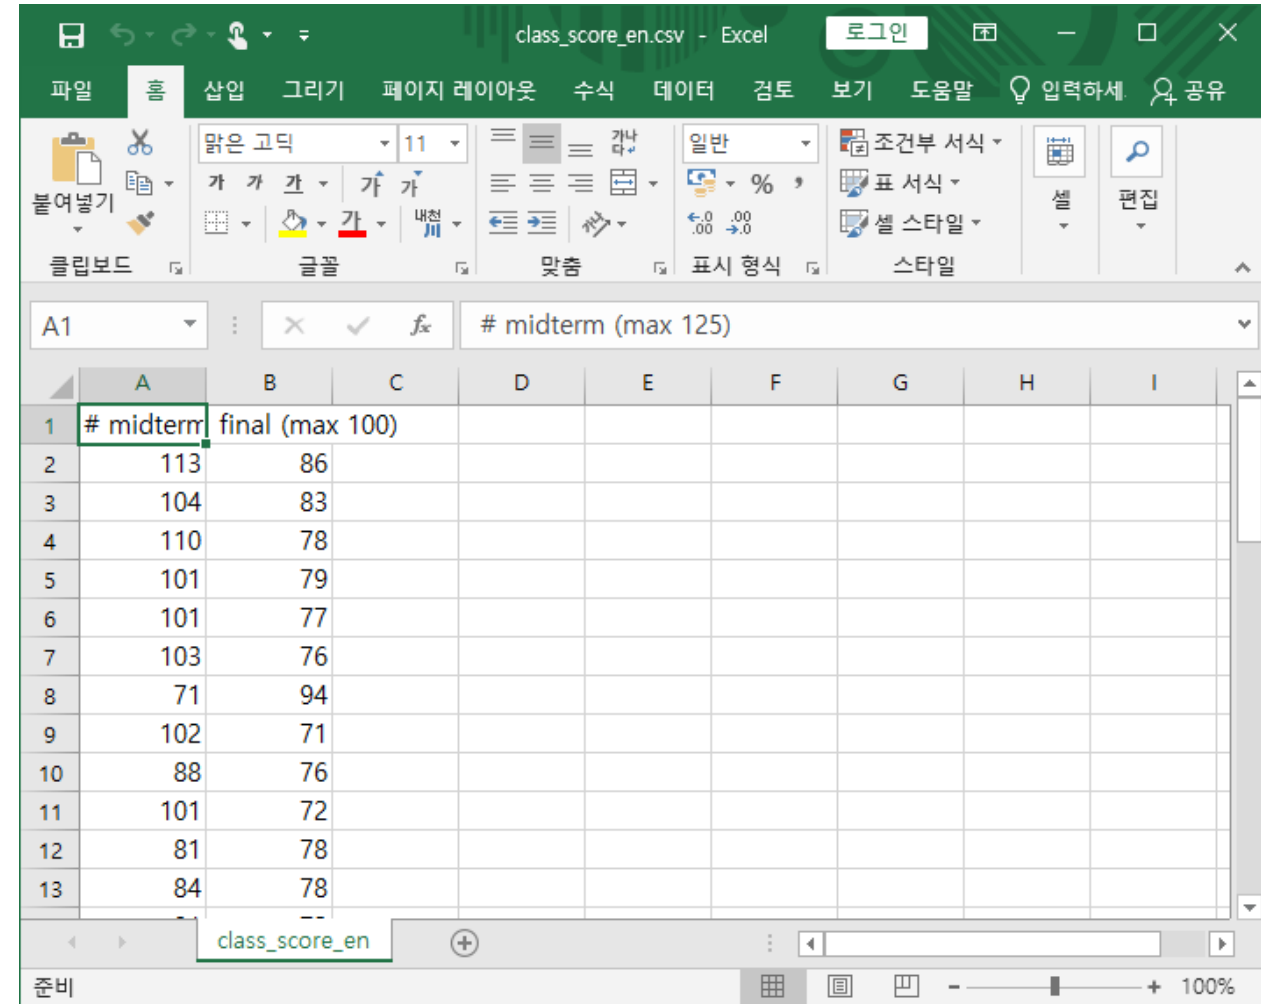

88, 76

101, 72

81, 78

84, 78

...

	# midterm (max 125)	final (max 100)
1	113	86
2	104	83
3	110	78
4	101	79
5	101	77
6	103	76
7	71	94
8	102	71
9	88	76
10	101	72
11	81	78
12	84	78
13		

Practice: Final Exam Score Prediction

- Expected results

- Problem

- Given: The midterm exam score
 - Result: The final exam score

- Solution: Line fitting

- Examples

Q) Please input your midterm score? 10

A) Your final score is expected to 13.608.

Q) Please input your midterm score? 40

A) Your final score is expected to 34.970.

Q) Please input your midterm score? 90

A) Your final score is expected to 70.573.

Q) Please input your midterm score? 120

A) Your final score is expected to 91.934.

Practice: Midterm and Final Exam Visualization

- The given skeleton code

(class_score_predict_skeleton.py)

- Step #1) Find a line

```
import glob, csv
import numpy as np
import matplotlib.pyplot as plt

def read_data(filename):
    ...

if __name__ == '__main__':
    # Load score data
    scores = np.array(read_data('data/class_score_*.csv'))
    midtm_range = np.array([0, 125])
    final_range = np.array([0, 100])

    # Estimate a line, final = slope * midterm + y_intercept
    line = [0, 0] # TODO

    # Predict scores
    final = lambda midterm: line[0] * midterm + line[1]
    while True:
        given = float(input('Q) Please input your midterm score (-1: exit)? '))
        if given < 0:
            break
        print(f'A) Your final score is expected to {final(given):.3f}.')

    # Plot scores and the estimated line
    plt.figure()
    plt.plot(scores[:,0], scores[:,1], 'r.', label='The given data')
    plt.plot(midtm_range, final(midtm_range), 'b-', label='Prediction')
    ...
```

Assignment

- Mission
 - Complete the given skeleton code (`class_score_predict_skeleton.py`)
 - Submit your code (`class_score_predict.py`)
- Condition
 - Please follow the above filename convention.
 - You **can** start from scratch (without using the given skeleton code).
 - However, you **should** use the given data.
 - You **can** freely change the given skeleton code if necessary.
- Submission
 - Deadline: **October 27, 2021 23:59** (**firm deadline**; no extension)
 - Where: e-Class > Assignments
 - Score: Max 5 points
